Testing Update

- TARGET ZONES SUCCESSFULLY PERFORATED
- RESULTS EXPECTED BY THE END OF THE WEEK

AIM quoted Empyrean Energy PLC today announces the following update on the Eagle North-1 well in California, USA.

Victoria Petroleum NL as operator for the Eagle North-1 well has advised that two intervals including the interpreted oil pay zones were successfully perforated over the weekend.

The operator has also advised that a near well bore clean up and nitrogen injection are being used to unload the well bore of fluids to provide conditions necessary for oil flow to occur. Very similar operations were used at the adjacent Mary Bellocchi-1 well resulting in a successful flow of oil to the surface.

The operator has also stated that although the positive wireline logs provided strong enough evidence to consider proceeding directly to the drilling of the horizontal completion well, it was considered important to first gain valuable reservoir engineering data from a vertical test.

The operator anticipates that the vertical test results may be known by the end of this week.
