Empyrean Energy PLC  
("Empyrean" or the "Company"; Ticker: (EME))

### Projects Update

AIM quoted Empyrean Energy PLC today announces the following update on its projects:

Eagle Oil Pool Development Project, California USA.

Victoria Petroleum NL as operator for the Eagle North-1 well has advised that at 0900 hours on 21 March Perth Standard Time operations were drilling ahead, with 5 7/8 bit using a directional tool at a measured depth of 4131 metres (13552 ft).

The operator has advised that a series of down hole mechanical problems with the mud motor and MWD tool coupled with some mud circulation issues had delayed the drilling operations.

Forward operations involve the completion of the radius of the drill curve in order to drill an approximate 300 metre horizontal well into the best inferred pay of the target Gatchell sands. The operator expects to intercept the target lower Gatchell sand at a true vertical depth of 4147 - 4149 metres (13606-13612 ft).

Glantal Gas Project, Germany.

FMI log analysis by an independent consultant has now been completed. The interpretation confirms a number of intervals that have natural fractures, essential for effective reservoir in this prospect. These intervals have also been ranked in order of interpreted flow potential. This data is now being correlated to all other log data collected to prioritise zones for testing, with completion of this process expected within the coming weeks. The operator is concurrently sourcing a completion rig to carry out the testing program.

During drilling, effective seal quality lithology was intercepted.

Further news on the proposed testing program is expected within the coming weeks.

A further update on both projects will be made as information becomes available.

The information contained in this announcement was completed and reviewed by the Technical Director of Empyrean Energy Plc, Mr Frank Brophy BSc (Hons) who has over 40 years experience as a petroleum geologist.
