Operations Update

Operations to prepare for production testing resume at Eagle North-1 in
California, USA

AIM quoted Empyrean Energy Plc today announces the following update on the Eagle North-1 well, San Joaquin Basin, California, USA.

Victoria Petroleum NL as operator for the Eagle North-1 horizontal well on the Eagle Oil Pool Development Project in the San Joaquin Basin advises that the deep workover rig arrived on the Eagle North-1 location on Friday 15th September and is currently rigging up with operations scheduled to commence Monday 18th September California time.

Prior to the arrival of the work over rig a coiled tubing rig carried out some work over a 36 hour period and established that it was highly unlikely that the tubing conveyed casing perforating guns fired during the first production test attempt.

The operations planned for the work over rig over the next 14 days is to retrieve the production valve and tubing conveyed guns in the horizontal well bore and clean out the well bore in preparation for the running of a new casing perforating gun to test the as yet untested 72 metres of oil pay behind casing in the lower Mary Bellocchi Gatchell sand. The exact timing of the proposed new cased hole test is subject to the results of the current work over operation and the market will be advised accordingly.

Empyrean's Commercial Director, Tom Kelly commented - "We are excited that operations to prepare for testing of the previous oil shows encountered at Eagle are about to recommence - it has been a long wait for equipment and we thank shareholders for their patience."

The information contained in this announcement has been reviewed by the

Technical Director of Empyrean Energy Plc, Mr Frank Brophy BSc (Hons) who has over 40 years experience as a petroleum geologist.
