Empyrean Energy PLC

("Empyrean" or the "Company"; Ticker: (EME))

Sugarloaf Hosston Prospect, Texas USA  
-----

- FURTHER GAS INDICATIONS IN THE PRIMARY TARGET

AIM quoted Empyrean Energy PLC today announces that at 6am Texas time on 9 November 2006, the Sugarloaf-1 exploration well was drilling ahead at 18,476 feet (5,633 metres).

Continuing gas indications over an aggregate of 70 feet (21 metres) were obtained while drilling between 18,320 feet and 18,445 feet. Total gas readings peaked at 326 units from a background of about 40 units and chromatography indicates the gas consists dominantly of methane (C1), with ethane (C2) and propane (C3).

The economic significance of these gas indications will not be known until wire-line logs, programmed to be run after the well has reached total depth, have been interpreted and flow testing, if warranted, has been evaluated.

Drilling is continuing towards proposed total depth of 21,000 feet (6,400 metres).

The information contained in this announcement was completed and reviewed by the Technical Director of Empyrean Energy Plc, Mr Frank Brophy BSc (Hons) who has over 40 years experience as a petroleum geologist.
