Project Margarita, Gulf Coast Texas USA

- Dona Carlota-1 production tests at CAOF of 20.5 million cubic feet per day

AIM quoted Empyrean Energy PLC today announces the following update with regards Project Margarita:

Empyrean has been advised by the Houston based operator Wandoo Energy LLC following further production testing at Dona Carlota-1, including a four point test, that the Calculated Absolute Open Flow Rate (CAOF) for the Dona Carlota-1 well is 20.5 million cubic feet of gas per day.

While the Dona Carlota-1 well will not be produced at this CAOF rate into the sales gas pipeline when connected at the end of July 2007, the high CAOF rate demonstrates the excellent gas deliverability of the target Frio sand. An initial sales production rate of 1 million cubic feet per day of gas is anticipated from the 14 metre gross gas column and net pay of 5.6 metres over the interval 1,423 - 1,437 metres.

Production testing continues at the Agavero gas discovery while drilling at Climaco-1 continues from the current depth of 1,106 metres towards the Vicksburg target at approximately 1,800 metres.

The Climaco Prospect is the third of the three prospects that are being drilled in the current program which are analogues of historic prolific Frio and Vicksburg sands production in the project area at <2,000 meters depth.

As with the successful wells in the first program, the tie in of any commercial discovery made on these prospects in this current three well program will be rapid as the project area is crossed by a number of gas pipelines with access rights and available capacity.

Participants in the Margarita Project are:

Empyrean Energy PLC*	44.00%
Sun Resources NL#	20.00%
Victoria Petroleum NL#	20.00%
Wandoo Energy LLC +	16.00%

Total 100.00%
